Mr. Jud Kurlancheek
Building, Zoning, and Planning Director
Village of Key Biscayne
88 West McIntyre Street, Suite 250
Key Biscayne, FL 33149

Dear Jud,

Thank you again for reaching out to us in regards to cleaning and maintaining the Village of Key Biscayne beach. Our recommendations and proposed costs for the services we discussed are attached.

Jud, there have been many discussions since the original RFP was published June 20th, 2013 regarding the best methodology, equipment and service level to meet the Village of Key Biscayne's needs. We have reviewed the Proposed Agreement between the Village and Universal Beach Services and have noted some issues and concerns that we have in particular with the Crandon Park Level 2 Specifications in our attached proposal.

We have confirmed with the Village, Coastal Systems International, and FDEP that the preferred cleaning methodology for the Village is the usage of Kubota Tractors and Seaweed Rakes incorporating seaweed below the Mean High Water Line (MHWL) as well as grooming these areas with our Barber SurfRake, rather than the "Caterpillar 615c or equivalent" noted in the Village's revised specifications. We have also confirmed with the Village that permanent beach access will be provided by the Village for our equipment by July 14th, 2014, and a permanent equipment storage area will be provided by the Village by August 1st, 2014.

As for the Proposed Agreement between the Village and Beach Raker, we have expressed our concerns regarding the contract language specifically regarding the Contractor's Termination clauses. We want to ensure that both parties, the Village and Beach Raker, enter into a fair agreement that mutually benefits both parties.

Jud, we are working towards the June 25th start date and we feel very confident that you and Village will be satisfied with our services. If you have any further questions for us regarding equipment, methodology, service or permitting, and/or wish to meet in person to discuss the information enclosed, please don't hesitate to contact me.

Thank you again for the opportunity.

Respectfully,

Andrew Greener

As permitted and allowed by FDEP, Contractor will be responsible for beach grading, erosion control, hazard management, tilling, and environmental permitting as requested by the Village.

6/10/2014

Note 1: The proposal costs above DO NOT include the hauling and disposal costs for heavy storm accumulations of seaweed that cannot be integrated below the tide line.

Note 2: The proposal costs above include the Contractor removing the man-made debris from the beach and maintaining the thirty (30) waste receptacles on the beach and depositing the waste in a dumpster provided by the Village. If the Village wishes for the Contractor to haul and dispose of the waste and man-made debris, not including seaweed, the cost per year will be an additional \$9,600.00.

Note 3: If the Village wishes to add an extra service day to the scope listed above, add \$755 per day.

Note 4: The Village will provide an equipment storage area for (2) Tractors and (1) Barber Surf Rake (dimensions listed above under Storage Section) with access to the beach and water line to wash off the equipment. The Village has stated the permanent storage area is being finalized, and will be ready August 1st, 2014. According to FDEP, another field permit will be required if the storage area changes from the Beach Club, and impacts the dune vegetation or the area seaward of the dune line. The Equipment Storage area does not have to be on the beach, we have other clients that provide areas in close proximity to the beach where the tractor and operator drive the road to the beach in the morning.

Note 5: The Village has agreed to provide the Contractor with access to the beach that will be ready July 14th, 2014. The Village has agreed that access will be adequate for a Fire Truck or Heavy Duty hauling truck as far as width and structural integrity for access from the road to the beach. The Village agrees this area is acceptable for the Contractor to access the beach with equipment as well as haul material off the beach, if necessary, at the request of the Village.

Note 6: Seaweed and Mechanical Cleaning. FDEP has determined that the Contractor can integrate seaweed below the Mean High Water Line (MHWL), year round, inside and outside of turtle nesting season. We understand the Village has applied for permission to mechanically clean areas landward of the wrack line, year round, including turtle nesting season. Until the Village receives approval from FWC and FDEP, the Contractor will not be authorized to use heavy equipment in areas landward of the wrack line, during turtle nesting season. The Contractor will hand-pick trash in these areas until approval is received. (We can help in the permitting process if desired by the Village. In the past, we have successfully received approval to mechanically clean areas landward of the wrack line, during turtle nesting season, for the following municipal clients, the Town of Lauderdale by the Sea, the City of Pompano Beach, and the City of Dania Beach.)

Note 7: Beach and Material Staging Area. We understand the Village is working with FDEP to designate and determine a possible staging area above the wrack line for the storage of seaweed during extreme storm events. Once the Village receives approval from FDEP and FWC, the Contractor will be authorized to store or stage any material, including seaweed, east of the dune line and in the dunes, during turtle

nesting season. Currently, the Contractor is not authorized to store material, including seaweed, on the beach landward of the wrack line during turtle nesting season.

Note 8: Crandon Park - Level 2 Quality, Spec. 3) the specifications call for a Caterpillar 615c, or similar, elevating scraper/motor grader to remove deposited seaweed and debris by scraping and removing the top layer of beach sand (up to 2 inches). However, the Village has agreed the preferred methodology for cleaning is to use the combination of a Barber Surf Rake and Tractor with front-mount and seaweed rake to integrate the seaweed, and bury it, below the Mean High Water Line (MHWL), as this methodology does not remove two (2) inches of beach sand.

Note 9: Crandon Park Quality – Level 2, Spec. 4) states Contractor shall make multiple passes using scraper blade to leave a graded, well groomed surface. As FDEP stated, currently we are only permitted to clean at the Mean High Water Line (MHWL).

Note 10: Crandon Park Quality – Level 2, Spec. 5) states no non-organic material may remain after daily beach cleaning effort. In our experience, there will always be some non-organic material on the beach after cleaning has finished as beach goers leave trash after we leave, and the tide brings in two (2) wrack lines each day of trash. That being said, the Contractor will use its Barber Surf Rake and Cherrington Sifter to groom the beach areas where we are permitted by FDEP to improve the quality of the beach.

Note 11: Crandon Park Quality – Level 2, Spec 8) level of compaction of cleaned beach sand shall be consistent with upland dry beach. In our experience, the upper beach and lower beach will always be different as far as compaction. The lower area experiences low and high tides, and has ocean water washing over it, and is usually wet, while the upper beach is normally dry and sandy. Additionally as stated by FDEP, during turtle nesting season, currently, the Contractor is not permitted to use its equipment above the wrack line, therefore the areas the Contractor cleans versus the areas that are not cleaned may have different compaction as the lower area will have heavy equipment driving and operating over it, and the upper will not.
